How are the School Climate Indicators Calculated?

The school climate indicators provide school-level descriptions of several factors that are known to influence learning success in schools.

Most of the subdomain scores are calculated by averaging the percentage of respondents who report the top two response categories on the survey items that comprise each scale. For example, “School Connectedness,” “Academic Motivation,” “Promotion of Parental Involvement,” and “Facilities Upkeep” are computed by averaging the percentage of respondents who report “Agree” or “Strongly agree” on the survey items that comprise the scale; “Caring Adult Relationships,” “High Expectations,” and “Meaningful Participation” are calculated by averaging the percentage of respondents who report “Pretty much true” or “Very much true” on the survey items that comprise the scale; and “Perceived School Safety” is measured by the percentage of students who report that they feel “Safe” or “Very safe” at school.

“Two or Fewer Absences per Month” – a measure of low chronic absenteeism – is measured by the percentage of students who report missing two or fewer days of school in the month prior to the survey. “Low Violence Victimization,” “No Harassment,” “No Mean Rumors,” and “No Fear of Getting Beaten Up” represent the percentage of students who reported not being victimized.

A value of 62 on the “School Connectedness” indicator, for example, means that on average, 62% of students report “Agree” or “Strongly agree” across the five “School Connectedness” survey items.

Results are based on responses from 9th and 11th grade students on the California Healthy Kids Survey. Results are not included if less than 50% of students or less than 15 respondents per grade provided data.

For the 2020-21 school year, results on student indicators that are only applicable to the In-school or Hybrid instructional models are reported if at least 10% of the respondents have indicated that they attended school in person or participated in hybrid classes. These results should be interpreted cautiously if few students attended school in person when the survey was administered.

Further information about the methodology used to construct the school climate indicators can be obtained by contacting Cindy Zheng at 562-799-5481 or czheng@wested.org.

State Averages

State averages are based on responses from 9th and 11th grade students who provided data on the California Healthy Kids Survey during the 2017-2018 and 2018-2019 school years.

The state average for “No Harassment” is not available (na) for the 2017-2019 academic years because a survey item that comprises the subdomain was changed after the 2019-20 school year.

Explanation of Other Indicators

Results are provided on selected key student- and staff-reported school climate items as a complement to the school climate indicators. Staff indicators are provided to facilitate comparisons between student and staff perceptions. While most staff indicators are in the high range (80-100%), it is important to compare how staff perceptions might differ from students to identify areas for improvements.

Staff results are not included if less than 50% of staff or less than five staff members provided data. Student- and staff-reported school climate measures and their sources are described below.

Selected Student-Reported School Climate Measures (CHKS)
